

Dear Land Owners and Residents,

My name is Michael Hankey. On July 6, 2009 at 1:06 AM a meteor flew over my house and I took a picture of it with my telescope. Here is that picture:

Since this time, I have been working with numerous scientists from around the world including PHDs from NASA as well as other respected universities and institutions. These scientists have been able to pinpoint the location of this meteor and they believe parts of it may be on your land.

The meteorites are extremely valuable both financially and scientifically. I would like to ask for your permission to search your land for these meteorites. Should we find any, they are your property. What you choose to do with them is your decision. Obviously should we find some I would like to make arrangements to purchase them from you. When that time comes you can choose what you want to do and if you are willing we can negotiate a purchase price for the meteorites. At this point I am simply trying to locate the meteorites and this is the main priority.

I understand that you are approaching harvest and many areas of your land are currently un-accessible. I would like to ask for your permission to search the areas of your property that do not have crops now and also at a later date to search your corn fields after your harvest is completed.

I also want to encourage you to search your own land and be on the lookout now but especially when harvest comes. Depending on the size of the meteorites they could cause damage to your farm equipment if you were to unknowingly drive over them. Finding meteorites is a pretty easy thing to do:

- look at the ground for black, heavy, dense rocks that look burnt.
- the rocks will be smooth, might be partially rusted and will be magnetic

I sincerely appreciate your time and consideration of this proposal.

Sincerely,

Michael Hankey
